REQUEST FOR TREATMENT OF SEED

SEED TREATMENT IMPORTANT

Ry
The Bureau of Plant Industry, U. S. Department of Agriculture, and the State College of Agriculture recommend the chemical treatment of seed grain for the prevention of smuts, barley stripe, and certain seedling blights.

Seed treatment improves yields and quality.

It is good insurance and should be applied to all wheat, oat, and barley seed purchased.

Treatment can be done on the farm or at elevators or community treating stations where large capacity equipment can be used.

Directions for treating seed may be had from your county agricultural agent or County Seed Committee.

SEED TREATMENT REQUEST

(To be filled out by seed purchaser and attached to the Application for Purchase of Seed)

If arrangements can be made by the County Seed Committee to have seed treated in a satisfactory manner, and if the cost of such treatment does not exceed 3 cents per bushel, I hereby request that my grain be treated as indicated below and agree to pay to the **County Seed Committee** the cost of treating the same:

KIND OF GRAIN	NUMBER OF BUSHELS TO BE TREATED
